

WhatsApp connection guide

Step-by-step manual for opening a new
Gravity Stretching studio in the WhatsApp inbox

17 steps • ≈ 60 minutes • Read once, repeat for every
studio

Before you start

This guide walks you through plugging a brand-new phone number into your bookgravity studio so that booking confirmations and the inbox start working. The process touches two systems: Meta (Facebook Business Manager) and bookgravity.com. Roughly an hour, mostly waiting for SMS verification.

What you need on hand

Phone number	Brand-new SIM (not registered in WhatsApp/WhatsApp Business app). If it was registered, delete the account first in the WhatsApp app.
Facebook account	Logged into business.facebook.com with admin access to your existing GravityStretching business.
Studio email + name	What the new studio will be called publicly, e.g. "Gravity Stretching Bali".
Meta payment method	Already added when you set up Canggu — reused automatically.
Access to bookgravity.com	Super-admin account (the one you log into /sadmin with).

How the parts fit together

Meta needs four pieces of data about your phone — Phone Number ID, WABA ID, System User Token, and the display phone. You'll copy these into bookgravity's super-admin → Studios → Connect WhatsApp dialog. After save, every booking made on the new studio's URL fires WhatsApp confirmations and shows up in the inbox automatically.

NOTE Don't reuse the +62 821-3130-468 number from Canggu — Meta forbids one number per WABA. Each studio needs its own SIM.

Phase 1 — Facebook (Meta) setup

Most of this happens once per studio. Aim to finish without switching tabs — the IDs are easiest to copy in one sitting.

1 Open Meta Business Suite

Go to business.facebook.com and make sure you're signed in with the account that owns your existing GravityStretching business.

On the left rail, click the WhatsApp Manager entry. If you don't see it, open All tools and pin it.

① Sign in with the right account → ② Click WhatsApp Manager

2 Open the Phone numbers tab

Inside WhatsApp Manager, click the Phone numbers tab at the top.

Your existing +62 821-3130-468 for Canggu shows up as Connected. We're adding a second row next to it.

Click the green + Add phone number button in the top-right corner.

③ Click +Add phone number

3

Fill in the new phone details + send SMS code

Business display name — what your clients see as the sender. Use the studio's public name, e.g. "Gravity Stretching Bali".

Category — pick Wellness (or Health & medical, both work).

Phone number — pick country code (☐☐ +62) and type the new SIM number.

Verify via — leave SMS selected. Voice call works too if SMS fails.

Click Send code. Meta SMS-es you a 6-digit code within ~30 seconds.

https://business.facebook.com/wa/manage/phone-numbers

Add a phone number

Step 1 of 3 — Phone verification

Info Verify Confirm

Business display name
Gravity Stretching Ball

Time zone
(GMT+08:00) Asia/Makassar

Category
Wellness

Phone number
+62 8123456789

Verify via
☒ SMS ☐ Voice call

Send code

④ Display name ⑤ Phone number ⑥ Send code

NOTE If the SIM is already used in WhatsApp app: open WhatsApp on the phone → Settings → Account → Delete my account. Wait 5 minutes, then try again here.

4 Enter the SMS code → number is now connected

Type the 6 digits Meta sent you. The dialog flips to Verified with a green checkmark.

Click Done. You land back on the Phone numbers list — the new row shows Connected with a grey UNKNOWN quality badge.

The quality goes GREEN automatically after a few days of real traffic. Don't worry about it for now.

TIP Quality stays UNKNOWN until you've sent a couple of dozen messages without users blocking the number. Doesn't block anything — it's a reputation gauge.

5 Open API Setup to grab your IDs

Switch to the developer console: go to developers.facebook.com → My Apps → click GravityStretchingAP (the app you set up for Canggu — we reuse it for every studio).

In the left rail click WhatsApp → API Setup.

In the From dropdown pick the new phone number you just added.

Copy the long number under Phone number ID — that's the one we need.

The screenshot shows the Facebook Developer Console interface. At the top, the browser address bar displays the URL: `https://developers.facebook.com/apps/1872775433439200/whatsapp-business/wa-dev-console`. The page title is "GravityStretchingAP" with the App ID "1872775433439200". A left-hand navigation menu includes "Dashboard", "Settings", "App Roles", "WhatsApp" (selected), and "API Setup" (sub-selected). The main content area is titled "API Setup" and contains several sections: "Temporary access token" (with a token string and a warning not to use it), "From (Phone number)" (showing a phone number and a "Phone number ID" labeled with a red circle 7), "WhatsApp Business Account ID (WABA ID)" (showing an ID labeled with a red circle 8), and "App ID" (showing the app ID). At the bottom, a green box contains the "Permanent token (System User)" path, labeled with a red circle 9. The path is: "Business Settings → Users → System Users → Add → Admin → Generate New Token → Permissions: whatsapp_business_messaging, whatsapp_business_management → Expiration: Never".

⑦ Phone number ID ⑧ WABA ID ⑨ Permanent token path

STOP Don't use the temporary access token shown at the top of this page — it expires every 23 hours and will break your studio's WhatsApp every day. The next steps create a permanent token instead.

6

Copy the WABA ID and App ID

Still on the API Setup page, scroll a tiny bit. Two more numbers to copy:

WhatsApp Business Account ID (WABA ID) — same for all studios under this business. It's 1571637721180000 for GravityStretchingCanggu — ALL your studios share this number because they share the WABA.

App ID — 1872775433439200. Also shared.

TIP Quick reminder: WABA ID and App ID are the SAME for every studio. Only the Phone Number ID changes between studios. Saves a lot of clicking.

7

Open Business Settings → System Users

Click your profile picture top-right → Business Settings.

In the left rail: Users → System Users.

Find the existing bookgravity-backend user (Admin role). If it doesn't exist for some reason, click Add and create one with name bookgravity-backend and role Admin.

Click Generate New Token on its row.

Business Settings

BG	bookgravity-backend Admin • GravityStretchingAP • WhatsApp Account	10 Generate New Token
-----------	--	--

Generate new token

App
GravityStretchingAP

Token expiration
Never **11**

Available Permissions **12**

- ☒ whatsapp_business_messaging
- ☒ whatsapp_business_management
- ☐ business_management
- ☐ ads_management

[Generate token](#)

10 Generate New Token **11** Expiration: Never **12** Both whatsapp permissions

8 Generate a permanent token

In the popup:

App — pick GravityStretchingAP.

Token expiration — Never (this is the whole point).

Available Permissions — check exactly two boxes:

✓ whatsapp_business_messaging

✓ whatsapp_business_management

Don't tick anything else — least-privilege.

Click Generate token. Meta shows the token once — copy it immediately. It looks like EAAa.... and is ~200 characters long.

NOTE Save the token to your password manager right away. If you close the popup without copying it, you can regenerate freely — no harm done, but it's annoying.

Stop and collect your data

Before moving to bookgravity, double-check you have the four values below. If anything is missing, go back — don't proceed without them.

Phone Number ID	1567283746829999 (NEW — copied from API Setup, step 5)
WABA ID	1571637721180000 (shared — same as Canggu, step 6)
Permanent Token	EAAa.... ~200 chars (NEW — generated in step 8)
Display phone	+62 8123456789 (the new number with country code, human-readable)

Phase 2 — bookgravity.com setup

Now we glue the data into your super-admin panel. This takes 5 minutes.

9

Sign in to /sadmin

Go to bookgravity.com/sadmin and log in with your super-admin email + password.

You see a list of all your studios — Canggu (Connected), Ubud, and any new studios you've created.

If Gravity Stretching Bali isn't on the list yet, click + New studio top-right, fill in name + slug + admin email, click Create studio. You'll get a 4-digit starter password — write it down.

13 Click 'Connect WhatsApp' on the new studio's row

10

Click 'Connect WhatsApp' on the new studio's row

The button is on the right side of the studio row, green pill.

A modal pops up: WhatsApp — Gravity Stretching [name]. Four fields to fill in.

WhatsApp — Gravity Stretching Bali

One-click Facebook flow: coming next — requires a configured Meta App. For now, paste credentials manually from WhatsApp Manager.

Phone Number ID
WhatsApp Manager → API setup → Phone number ID

1567283746829999 14

System User Access Token
Permanent token with whatsapp_business_messaging + management scopes

..... 15

Display phone
Shown to admins. E.g. +62 ...

+62 8123456789

Enable for clients now ☒ 16

Cancel Save 17

14 Phone Number ID 15 Token 16 Enable now 17 Save

11 Paste the credentials

Phone Number ID — paste the long number from Meta API Setup (step 5).

System User Access Token — paste the EAAa.... token (step 8). The field is type=password so it's masked; that's expected.

WABA ID — paste the shared WABA ID (step 6).

Display phone — type the human-friendly version, like +62 8123456789. This is what admins see in the inbox header.

12 Toggle 'Enable for clients now' → Save

Flip the Enable for clients now switch to ON (green).

Click the green Save button.

The dialog closes. The studio row now shows a green Connected ✓ badge.

Gravity Stretching Bali

bookgravity.com/bali

Connected

+62 8123456789 • GREEN quality

Open admin →

WhatsApp connected!

Templates auto-imported from your Canggu account. New bookings will send WhatsApp confirmations to clients and notifications to trainers.

The studio is live. Bookings on this URL now fire WhatsApp.

Phase 3 — sanity check (2 minutes)

13 Make a test booking on the public booking page

Open the studio's public URL: [bookgravity.com/\[slug\]](https://bookgravity.com/[slug]) (replace [slug] with the slug from step 9 — e.g. bali).

Make a booking with your own phone number as the client. Pick any slot, any trainer.

Click Confirm.

Within 5 seconds you receive a WhatsApp from the new number to your phone — "Hi [name], your booking is confirmed...". ☐

14 Check the trainer notification

The trainer assigned to that slot also gets a WhatsApp template message (if their whatsapp field is set in /admin/trainers).

If they don't see it, the trainer probably has no WhatsApp number on file. Open the admin → Trainers → click pencil → fill it in.

15 Open the inbox and see the WhatsApp arrive in real time

Log in to the studio's regular admin: [bookgravity.com/\[slug\]/admin](https://bookgravity.com/[slug]/admin) with the starter password from step 9.

Look for the round green chat button bottom-right. Click it — the inbox opens.

The system-sent booking confirmation is the first conversation. Reply to yourself from the WhatsApp app on your phone, and watch the message appear in the inbox within seconds.

TIP Auto-translation kicks in automatically because new studios default to `inboxLanguage = ru`. If the test client writes in English, the inbox will show the Russian translation as the main bubble and the original English underneath in grey.

Troubleshooting

"Phone number can't be added"	The SIM is still registered in the WhatsApp app. Delete the account inside the phone (Settings → Account → Delete) and wait 5 minutes.
SMS code never arrives	Switch to Voice call in the dialog (step 3). Indonesian carriers sometimes drop Meta SMS.

Token expired after a day	You picked a 24h token. Re-do step 8 with Expiration: Never.
Bookings made, but no WhatsApp message	Check the booking row in /admin/bookings — the waNotifyTrainerStatus column shows failed with the reason. Common causes: bad Phone Number ID, token doesn't have whatsapp_business_messaging permission, Meta billing problem.
Templates rejected by Meta	Open Templates in WhatsApp Manager. New studios under the same WABA inherit the already-approved booking_confirmed_v2, trainer_booking_v3, admin_message, etc. If a template shows Rejected, click it to see the reason.

Glossary

If anything in this guide felt opaque, here's the cheat sheet.

WABA	WhatsApp Business Account. A Meta object that owns one or more phone numbers. Every Gravity Stretching studio shares the same WABA.
Phone Number ID	Numeric ID Meta assigns to each phone you connect. This is what Cloud API sends/receives from. Unique per studio.
App	Your developer.facebook.com object. One app per business; you can connect many phones to it. We use GravityStretchingAP (App ID 1872775433439200) for all studios.
System User Token	Permanent OAuth token tied to a System User (server-side bot). Never expires. Stored encrypted in Studio.whatsappAccessToken in our DB.
24h customer-service window	Meta's rule: free-form text only works if the client wrote to your number in the past 24h. Outside that window we fall back to approved templates.
Template	A pre-approved message body with variables like {{1}}. Required for outside-window messages. Approved templates: booking_confirmed_v2, trainer_booking_v3, admin_message, inbound_message_copy.
inboxLanguage	Per-studio admin language. When set (e.g. ru), inbound messages get auto-translated. Set in /admin/settings → Inbox language.

That's it. Repeat phases 1–3 for every new studio.
